# DOs & DON'Ts

## INSTALLATION OF DISPENSERS

### DO...

- Follow manufacturer's installation instructions and applicable local codes.
- Be certain that emergency valves are installed at the proper height.
- Wear eye protection when checking for leaks, etc.
- Verify that all bolts on the electrical junction box are secure.
- Plug all unused openings in the electrical junction box.
- Check for leaks in all hanging hardware and internal components.
- Follow lockout/tagout procedures— turn off, tag and notify employees.
- Ground all dispensers as required in the electrical code and the manufacturer's instructions.
- Watch for sharp edges.
- Block an MPD-type dispenser securely when tilting it in order to connect the piping.
- Use mechanical devices to set an MPD-type dispenser.
- Wear hard hats and steel-toed safety shoes.
- Check that the dispenser is dispensing the correct product and that the proper nozzle is installed.
- Check electrical seal offs to be sure they have been properly packed and poured.

### DON'T...

- Try to pick up a unit yourself. Get help.
- Run power to a unit without conduit, explosion-proof connectors, etc.
- Use electrical tape to splice electrical lines.
- Place a unit into operation if it is damaged or is unsafe.
- Dispose of flammable fluids in an unsafe manner.
- Install the breakaway device in a manner other than that recommended by the manufacturer..
